Plant Floor Digital Transformation
Readiness Assessment with Connected Process Control

Is your organization ready for the Industry 4.0 shift? Discover the essentials for a successful plant floor digital transformation with this comprehensive checklist. From process requirements to hardware and infrastructure needs, this one-page guide will help make sure you are prepared for a digitally empowered future.

Digital Transformation Readiness Checklist:

1 Do you know your process and to what level it's defined?

☐ **Are your SOPs accurate? Have you updated excel files, binders, workflow sheets, etc.?**
It's much easier to create a digital twin of your process if your SOPs are up to date.

☐ **Do you have connected devices? (e.g. Barcode Scanners, DC Torque Tools, Webcams, etc.)**
While connected devices may not be necessary in your process, there are robust benefits, including the ability to access real-time data and eliminate the burden on operators to remember and record information (or enter incorrect data if collected manually).

☐ **Do you have PLC connectivity? (e.g. standalone machines or test equipment)**
Epicor provides PLC template code that allows for streamlined PLC communication, sequence control and data gathering.

2 Do you have the basic infrastructure needed?

☐ **Reliable Network on the Plant Floor**

☐ **Workstation PCs or Tablets**

☐ **Connected Devices**

3 Do you have the resources and culture to drive the project forward?

☐ **Dedicated Champion**
A dedicated person or group that can own the project and drive it forward. Someone who is experienced, knows the process well, and is given the appropriate time and resources to effectively manage it.

☐ **Internal Support**
Buy-in from all stakeholders—from the plant floor to the C-Suite—with aligned transformation goals and business objectives. A CEO who sees value in it, a finance team that has allocated budget for it, and a plant floor team ready to implement it and monitor it for ROI.

If you completed the checklist above and have a well-defined manufacturing process, an established infrastructure, an appointed internal champion, and the culture to support a transformation project, you are ready to go digital! **Epicor Connected Process Control can take you to the next level.**
